

Environmental enrichment plays an important role in supporting natural behaviour, physical activity and animal wellbeing. Developed in consultation with a leading Contract Research Organisation, Tetrabode is a versatile enrichment system designed for primate enclosures.

Its hollow interior and multiple wide-cut openings create opportunities for climbing, perching, swinging, exploration and retreat. Used alone or linked with additional units, Tetrabode helps facilities create dynamic, three-dimensional environments, while its robust, easy-clean construction supports practical day-to-day husbandry.

Flexible enrichment for engaging environments

- ✓ **Encourages natural behaviour**
Supports climbing, perching, swinging, hiding and exploration
- ✓ **Adapts to different enclosures**
Use as a standalone item or secure to walls, ceilings, ropes or chains
- ✓ **Creates dynamic configurations**
Link multiple units to build larger, interconnected structures
- ✓ **Designed for long-term use**
Robust UV-stabilised nylon withstands continuous long term use

Frequently Asked Questions

How can Tetrabode be installed?

Tetrabode can be used as a standalone enrichment item, securely attached to enclosure walls or ceilings, or suspended from suitable ropes or chains.

Can multiple Tetrabode units be used together?

Yes. Multiple units can be linked to create larger, interconnected structures, adding different routes, levels and opportunities for exploration within the enclosure.

How should Tetrabode be cleaned?

The smooth polyethylene surface is designed for straightforward cleaning and maintenance. Always follow your facility's approved cleaning and disinfection procedures.
